

Gotharman's Little deFormer 3

Granular Workstation

Update Manual 11.69

-Resonator Type 2 added to Resonator Insert Effects.

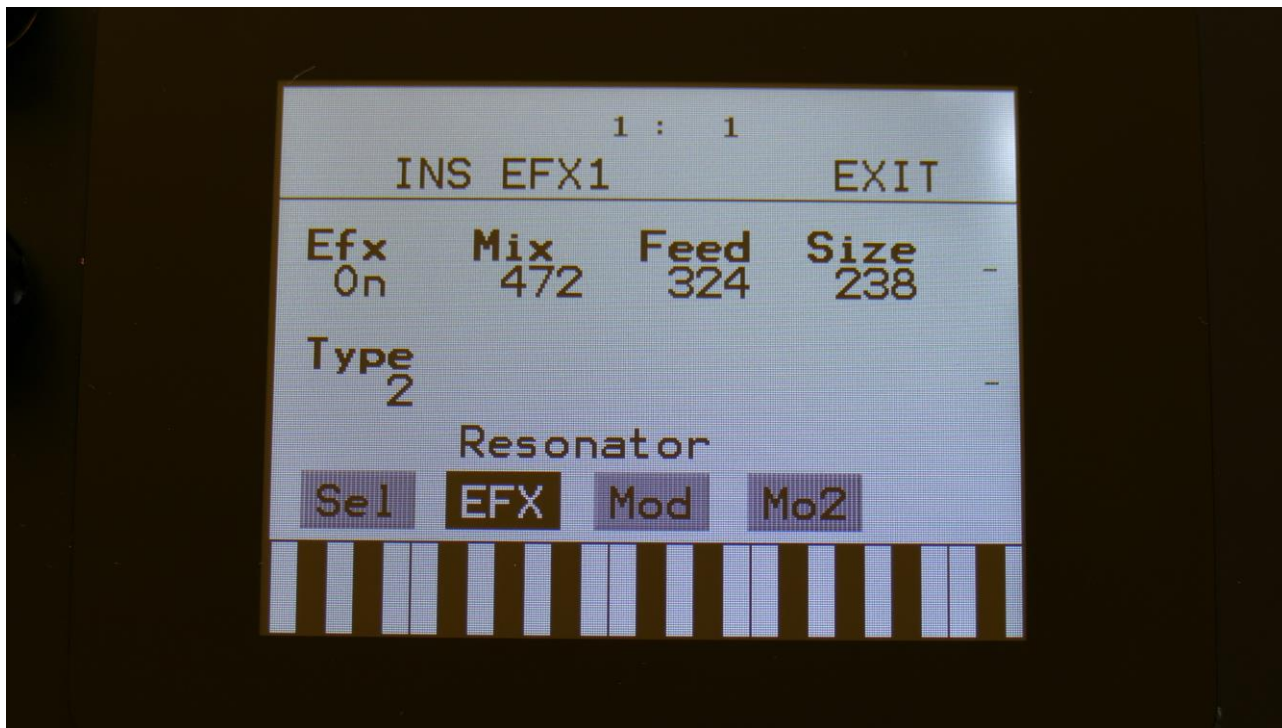

[Page3](#)

-Output Effects 1 and 2 gain has been moved from the Zone page to the output effects Mod2 page.

[Page4](#)

Resonator Type2 Insert Effect

On the Resonator insert effect, it is now possible to switch between type 1 and type 2, using the new Type parameter:

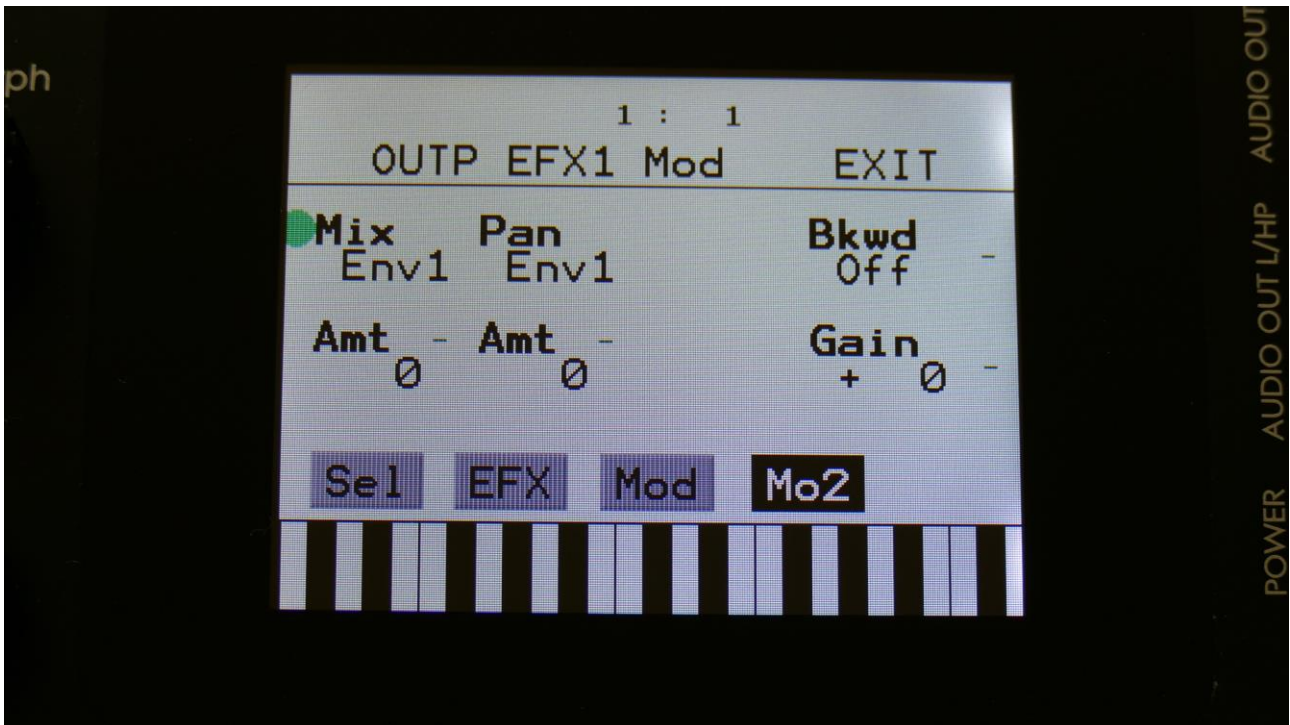

Type 1, that has been there since the beginning of Tiny LD, are a traditional resonator, based on the Karplus Strong algorithm.

The Type 2 Resonator are a new type, that is based on generating the resonances, that are fed back, using real filtering. The 2 types are quite different.

Output Effects Gain

The gain setting of the 2 output effects processors has been moved from the Zone page, to the output effects Mod2 page.

Gain: Sets the output level of selected Output Effect . A positive value gains the level, and a negative value attenuates it.

This parameters is not morphable.
